Statistics: Mean 53.273; Variance 101.693; scale 0.524

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

The present sequence is a H. pylori cytoplasmic protein.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.

The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be H. pylori cytoplasmic protein, 16ae10508orf10.

                                                                                                                                                                   Protease(s) and genes encoding them obtained from Thermococcus and Pyrococcus strains - have extremely high thermal stability and are useful industrially and as research reagents
Disclosure; Page 100-108; 159pp; Japanese.
This sequence represents the protease from Pyrococcus furiosus. This sequence is a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can used as research reagents, and industrially in the food, drug and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LT 2

                                                                                                                                                                                                                                                                                                                                                                   Guo H, WPI; 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pyrococcus furiosus hyper:thermostable protease gene - useful recombinant prodn. of hyper:thermostable protease Example 2; Page 57-64; 85pp; Japanese.
The invention relates to a gene (T08111) that codes for a hyperthermostable protease (R87007) of Pyrococcus furiosus. A related DNA sequence (T08132) includes the coding sequence of the protease gene and encodes a protein (R87008) that
comprising an excised RNA transcript encoded by the group II intron alZ (see also T63319) of the COX1 gene and a protein encoded by the group II intron alZ of the COX1 gene. The RNP is incubated with the DNA substrate in the presence of a divalent cation so that at least one strand of the DNA substrate is cleaved and a nucleic acid molecule is attached to one or both of the cleaved strands. The
                                                                                                                                         Disclosure; Page 40-42; 58pp; English.
Yeast mitochondrial COXI gene intron ail-encoded protein (W16303)
can be used in a novel method for cleaving a double-stranded or
single-stranded DNA substrate. The method utilises a nucleotide
integrase, pref. a (reconstituted) ribonucleoprotein (RNP) particle
                                                                                                                                                                                                                                                                                                                                                                                                    11-SEP-1996; U14609.

Sequence
      Claim 5; Page 25-26; 62pp; French.
Sequences W25926-7 represent novel allelic Xenopus laevis melatonin receptor MEL-1A proteins. This sequence is a new form of the melatonin receptor designated MEL-1AA, also known as Mel 1-(clalpha). The protein differs from previously known receptors by being 65 amino acids shorter and also having 2 different C-terminal amino acids. The protein is encoded by 2 different alleles (T79063-4) which differ in the 3'
                                                                              New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer

New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer Claim 5; Rage 30-31; 62pg; French.
Sequences W25926-7 represent novel allelic Xenopus laevis melatonin receptor MEL-la proteins. This sequence is a new form of the melator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Xenopus melatonin receptor MEL-IAb.
Allele; Xenopus laevis; melatonin; receptor; untranslated region; PC mRNA; half-life; skin; amplification; primer; polymerase chain react transmembrane domain; cellular signalling; inhibition; adenylyl cycl modulation; intracellular; cyclic GMP; inhibitor; phosphodiesterase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    thought to affect the half-life of the mRNA. The coding sequence was isolated from cDNA derived from Xenopus skin RNA and amplified using the primers T79067-76. The nucleotide sequence encodes a 7 transmembrane receptor involved in cellular signalling. MEL-lah has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular cCMP, esp. inhibiting its accumulation induced by an inhibitor of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  receptor designated MEL-1Ab, also known as Mel 1-c(beta). The protein differs from previously known receptors by being 65 amino acids shorter and also differs throughout the sequence by 6 amino acids. The protein is encoded by 2 different alleles (T79065-6) which differ in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The coding sequence was isolated from cDNA derived from xenopus skin RNA and amplified using the primers T79067-76. The nucleotide sequence encodes a 7 transmembrane receptor involved in cellular signalling. MEL-1Ab has been shown to modulate intracellular cGMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodiesterase, but unlike the MEL-1Aa protein, it cannot inhibit adenylyl cyclase activity.

                                                                                                                                                                                                                                                                                                          The present sequence represents a recombinant squirrel protease inhibitor protein 55RS that contains a specifically claimed reaction site, see features table. The protease inhibitor 55RS has inhibitory activity against trypsin, elastase or thrombin. The protease inhibitor has a new structure similar to alpha-1-antitrypsin and shows selective inhibitory activity against proteases. The protease inhibitor cDNA was homologous to cDNA encoding a similar squirrel protein designated
                                                                                                                                                                                                                                                                                                                                                                                                                                        protease(s)

High-affinity melatonin receptor.

Melatonin receptor; G-protein-coupled receptor; glycosylation;
disulfide bond; ligand binding pocket; phosphorylation;
cytochrome-c family heme binding site; melatonin receptor-agonist;
melatonin receptor-antagonist; circadian rhythm disorder; jet-lag;
day-night cycle disorder; ovulation; reproductive cycle; antibody;
animal breeding; puberty; transgenic animal; drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence represents a high-affinity melatonin receptor (mol.wt. 47,424) from Xenopus laevis. The receptor is a membrane protein, CC coupled to guanine nucleotide binding proteins (G-proteins), and has 7 hydrophobic putative transmembrane domains. The N-terminus CC has 7 hydrophobic putative transmembrane domains. The N-terminus CC has an N-linked glycosylation site typical for G-protein-coupled CC receptors, and 2 Cys residues in the 1st 2 extracellular loops may CC form a stabilizing disulfide bond. Pro residues in transmembrane CC domains IV, V and VI may introduce kinks in the alpha-helices to form of a ligand binding pocket. Phosphorylation sites in the CC c-tail may be used for isolation of sheep, mouse and human creceptor sequences. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                  The sequence was deduced from a clone isolated from a gene library prepal from P. cepacia. It is the 1st of five proteins encoded by ORFs fadA-fadE which are essential for fusaric acid resistance. The protein has a mol. wt. of 47 kD. The genes can be introduced into plants in order to control plant diseases such as wilting disease caused by Fusarium fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Reppert SM;

FeLV F6A provirus clone 61E encoded nucleocapsid FeLV; retrovirus vaccine; AIDS; disease model; i viraemia; leukaemia; therapy; nucleocapsid.
Feline immunodeficiency virus subtype A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Barnacle adhesion protein gene - for production of adhesive protein Claim 1; Page 7; 7pp; Japanese.
This is the amino acid sequence of the barnacle (Megabalanus rosa) adhesion protein. The corresp. gene was isolated from a cDNA library using the probe T05723 which is derived from amino acid sequencing of the purified protein. The gene is used to produce an adhesive protein which can be used in water.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LT 11

Clone 61E is replication competent and capable of inducing persistent viraemia in cats. Host cells, e.g. feline cell can be transformed with DNA derived from 61E and used to produce infectious virus useful in vaccines, in the generation of viraemia and in disease challenge systems.

Claim 6; Fig 1.1-17; 23pp; English.
Variant of viral genome induces immunodefficiency in cats similar NaIDS. May be used in research, especially in testing drugs and vaccines against vireamia and and feline leukaemia viruses.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents T. litoralis DNA polymerase. The DNA CC sequence encoding this protein contains introns decribed in the Specification, however this protein sequence appears to be translated through these intronic sequences. Only a portion of the DNA CC plymerase protein sequences. Only a portion of the DNA CC plymerase protein sequence is reproduced in the specification. The CC intoralis DNA polymerase gene sequence may be derived from the bacteriophage NEB #619 on an approx. 14kb BmmHI restriction fragment. CC when this gene is transformed in to E. coli and expressed in its CC entirety, it is found to be unstable. There is a high frequency of mutation in the polymerase gene, cell growth is slow and there is some degree of cell mortality. This instability is due in part to the presence of the two introns. It is thought that the intervening DNA in this sequence encodes a separate protein which may be spliced out at the protein level. The second, 1170bp, intron has been found to cold for an endonuclease which self splices out in E. coli. To improve stability of the DNA when it is expressed in E. coli, the Specification states that it is desirable to delete the introns of the expression vector into E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Example 2; Fig 14; 97pp; English.
The rpsL gene of M.leprae encodes the S12 protein of the small ribosomal subunit that is responsible for resistance to streptomycin. Two primers were designed based on this sequence and were used in a PCR amplification of M.tuberculosis DNA. Sequence analysis of the 306bp amplified fragment showed 28 differences between the rpsL gene from M.leprae (Q5153) and M.tuberculosis (Q61454). In streptomycin resistant strains, a single amino acid substitution due to a mutation in codon 43 (wild-type AAG mutated to AGG) was identified; substitution of Lys42 by Arg results in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            18-DEC-1992; 311622.

Run on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Fri Dec 18 18:36:16 1998; MasPar time 12.67 Seconds 811.235 Million cell updates/sec

Tabular output not generated.

Title: >US-08-951-733-14 (640-940) from US08951733.pep (2 of 2) 2214

Description: Perfect Score: Sequence: TSRLRFIPKPDGLRPIVNMD.....NLRKTVVNFPVEDEALGGTA 301

Searched: PAM 150 Gap 11 107076 seqs, 34141958 residues

Scoring table:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir56 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 47.293; Variance 102.661; scale 0.461

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ##cross-references GB:S56952; NID:g298654; PID:g298656
This protein responds to changes in serine concentration in the
environment, transduces a signal from the outside to the inside
of the cell, and facilitates sensory adaptation through various
levels of methylation.

                                                     Labouesse, M.; Herbert, C.J.; Dujardin, G.; Slonimski, P.I
EMBO J. (1987) 6:713-721
Three suppressor mutations which cure a mitochondrial RNA
maturase deficiency occur at the same codon in the open
reading frame of the nuclear NAM2 gene.
                                                                                                                                                                                                                                                                                                                                                                           submitted to the EMBL Data Library, December 1994 The sequence of S. cerevisiae cosmid L3502. $51470

#title Divergence of the mitochondrial leucyl tRNA synthetase genes
in two closely related yeasts Saccharomyces cerevisiae and
Saccharomyces douglasii: a paradigm of incipient evolution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Dec 18 18:37:17 1998; MasPar time 9.66 Seconds 836.466 Million cell updates/sec

Tabular output not generated.

Title:

Description: Perfect Score: Sequence: >US-08-951-733-14 (640-940) from US08951733.pep (2 of 2) 2214

TSRLRFIPKPDGLRPIVNMD......NLRKTVVNFPVEDEALGGTA 301

Scoring table: PAM 150 Gap 11

Searched: 74019 seqs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swissprot

Statistics: Mean 49.063; Variance 85.433; scale 0.574

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. GEN. MICROBIOL. 137:2505-2515(1991).
-!- FUNCTION: MAY HAVE AN IRON-RESPONSIVE REGULATORY FUNCTION.
-!- CATALYTIC ACTIVITY: CITRATE - CIS-ACONITATE + H(2)O.
-!- PATHWAY: TRICARBOXYLIC ACID CYCLE.
-!- SUBUNIT: MONOMER.
-!- SUBUNIT: MONOMER.
-!- SUBUNITABE HAS AN ACTIVE (4FE-4S) AND AN INACTIVE (3FE-4S)
-!- THE ACTIVE (4FE-4S) CLUSTER IS PART OF THE CATALYTIC SITE INTERCONVERTS CITRATE, CIS-ACONITASE, AND ISOCITRATE.
-!- SIMILARITY: BELONGS TO THE ACONITASE/IPM ISOMERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN-K12;
